

Data Compression Tutorial

Sreenivas
Jayanth Yadav
AM-EN-0456789

① Tutorial

"data" 2³-8

Max 8 Code words

$$P(d) = 0.25$$

$$P(a) = 0.5 \rightarrow \text{higher}$$

$$P(t) = 0.25$$

d

a

t...

d

ad

aa

at

t

Code:

d - 000, ad - 001, at - 010

aad - 110, aat - 111

aat - 111

②

$$n = 25, m = 7$$

$$q = \left\lfloor \frac{25}{7} \right\rfloor = 3 \Rightarrow r = 25 - 21 = 4$$

$$n = qm + r$$

$$\Rightarrow 25 = 3 \times 7 + 4$$

So we ~~get~~ have 1110
a

Code	n
1110000	0
1110001	1
1110010	2
1110111	3
1110100	4

$$n = 25, m = 7$$

$$\left\lceil \log_2 7 \right\rceil = 3$$

$$\left\lfloor \log_2 7 \right\rfloor = 2$$

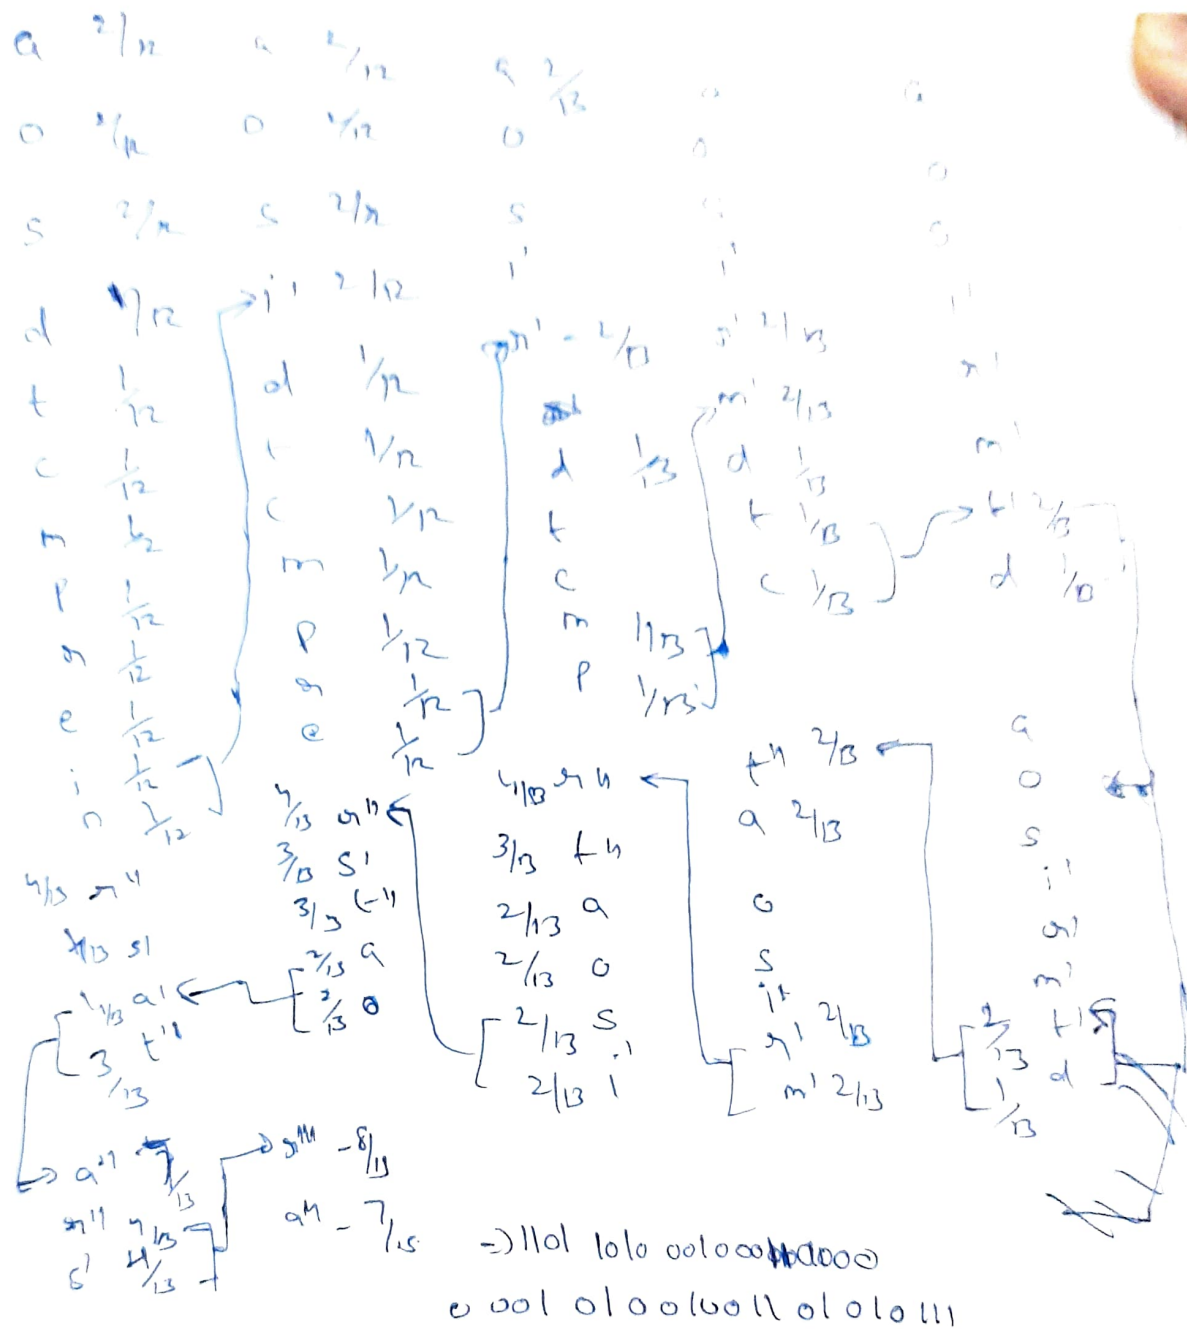

$$2^3 - 7 = 1 \rightarrow 2 \text{ bit}$$

$$2^2 - 7 = 5 \rightarrow 3 \text{ bit}$$

Signature

③ state Huffman coding.
